Locus launches ActFast

Locus Telecommunications, a full-service telecommunications company and prepaid wireless MVNO (Mobile Virtual Network Operator), has launched its distributor support service ActFast, an automated way to activate Locus prepaid wireless phones.

Locus created ActFast to interface and exchange information with both the underlying carrier's mobile switch activation and billing platforms. This proprietary solution also incorporates speech recognition as a component of an automated means to add airtime to the end-user's wireless phone account.
